

"TAC TAC" SYSTEM

TT press crimp height adjustment

For those who have not the pleasure to use the Mecal mini applicators

..... and its effective continuous regulating head.
Provided the applicator is equipped with a "limited" set up disk, with this new feature is possible to vary the crimping height, thanks to the "TAC TAC" system installed on the press. Simply by unlocking the M8 front screw on the press slide, you can turn the setting disk (see picture on the left) and, starting from the "zero" reference on the scale, have the possibility to increase the height of 2mm or decrease it of 3mm. Each step guarantees a difference of 0.025mm.
